New Industrial Revolution: Can Manufacturing Learn a Lesson From Farm-to-Table?

There's a lot of talk about the "Future of Making Things" and manufacturing's "New Industrial

Revolution.” But the way we interpret “industrial”—and its definition moving forward—is going to change dramatically. How can you create a factory-to-table approach to both the new consumer demands and defining “industrial” in the future? [read on >](#)

Most people in the general public have an awareness that robots are being programmed to defeat humans at games like chess, poker, and Jeopardy. But if you ask most people how robots, automation systems, and "lights-out manufacturing" are affecting the products they buy, they probably won't have a clue. [read on >](#)

About D3 TECHNOLOGIES.

Founded in 1998 by manufacturing engineering & design professionals, D3 has become a trusted advisor to manufacturing companies throughout the U.S. helping them win more business and reduce costs.
