

“ Partnering with D3, [through Automation] we took our design time from HUNDREDS of hours per product to about 30! ”

-Dave Mason, President, ASC Process Systems

Who's D3? A WORLD-CLASS INTEGRATOR of AUTODESK MANUFACTURING SOLUTIONS

Who We Are

Founded in 1998 by manufacturing engineering & design professionals, D3 has become known as a **top integrator of Engineering & Design Technologies** helping manufacturing companies nationwide be more successful.

What We Do

We consult with manufacturing companies to help them increase revenue and reduce costs through **Training, Mentoring, Support, Professional Service, Engineering Technologies and Prototyping Solutions!**

How We Do It

We do this through the optimization of **People & Processes** and by leveraging the latest in **Engineering & Design Technologies**. Some examples of our services are:

- Provide **Professional CAD Training** for your engineering team to help them be most productive and reach maximum potential.
- Increase key employee effectiveness and retention through **Mentoring** and implementing a professional learning plan.
- Provide **Real-Time Support** to always keep your engineering team online working and productive.
- Architect the implementation of **Data Management** tools, processes, and procedures to control, protect, deliver, and enhance the value of engineering data throughout the manufacturing enterprise.
- **Implement & Integrate** the latest engineering and design technologies seamlessly into YOUR world...most of which you probably already own but haven't utilized or maximized yet.
- **Automate Engineering & Design** tasks to greatly reduce lead times and minimize mistakes.
- Increase sales by turning around estimates and quotes in minutes through **Sales Automation** which leverages existing engineering data.
- Beat your competition and win more business by utilizing **3D Renderings** to visualize and market your products before they are built.
- **Validate the Integrity** of your designs before creating costly physical prototypes by **Virtually Simulating the Real-World Environments** they need to sustain: stresses, loads, vibration, heat, wind, motion, friction, etc.
- Take your **Digital Prototypes to Physical Prototypes** with 3D Printing, 3D Scanning and CNC Machining. As a Value Added Reseller for 3D Systems, we represent their line of **3D Printers & 3D Scanners**, and we also have our own in-house **CNC Machine Shop** to machine your designs.

- ✓ **Win More Deals!**
- ✓ **Slash Production Costs!**
- ✓ **Increase Innovation**
- ✓ **Improve Quality!**
- ✓ **Be More Competitive!**

“ Many service companies throw it around, but D3 truly is the epitome of 'Trusted Advisor'. ”

-Jason M. Klein, President of Engineering CUSH Suspensions

Our Methodology

As a Trusted Advisor we help manufacturing companies become **more efficient, boost productivity, and increase quality** by invoking **Lean Engineering** principles similar to those of **Lean Manufacturing**. First, we collaborate with key stake-holders to develop a master plan. This allows us to isolate target areas poised for improvement, prioritize them, and strategically execute on them. The purpose to the Lean Engineering methodology is to increase the amount of valid engineering data (**Engineering Intelligence**) produced per dollar invested in your engineering assets (**People, Processes, & Technologies**).
